

Felipe Sales de Oliveira

Cloud, DevOps & SRE Engineer | AWS, Kubernetes, Terraform, CI/CD & Observability

Florianópolis – SC | (48) 99629-7388 | fesales.oliveira@gmail.com
linkedin.com/in/felipesalesdeoliveira | github.com/felipesalesdeoliveira

PROFESSIONAL SUMMARY

Cloud, DevOps and Site Reliability Engineering (SRE) Consultant with experience in AWS architecture, infrastructure automation, Kubernetes, CI/CD, GitOps, observability and cloud-native operations. I work with Terraform, Amazon EKS, Docker, Helm, GitHub Actions and Argo CD, as well as synthetic monitoring, metrics, logs, traces, dashboards and alerts using Elastic Stack, Kibana, Prometheus, Grafana, Loki and OpenTelemetry. Experienced in troubleshooting, incident investigation, and failure and integration analysis, focusing on service stability, availability and reliability. Engineering background with an analytical approach, systems thinking, organization and risk analysis.

TECHNICAL SKILLS

- Cloud and IaC: AWS, Terraform, Infrastructure as Code, Linux and networking
 - Containers and Orchestration: Docker, Kubernetes, Amazon EKS and Helm
 - CI/CD and GitOps: GitHub Actions, Jenkins, Argo CD, Git and CI/CD pipelines
 - Observability: Prometheus, Grafana, Loki, Elastic Stack, Kibana and OpenTelemetry
 - SRE and Operations: synthetic monitoring, troubleshooting, incidents, availability and reliability
-

PROFESSIONAL EXPERIENCE

Cloud, DevOps & SRE Consultant

FSO Cloud Consulting | Jan. 2025 - Present | Florianópolis, SC

Independent work on Cloud, DevOps and SRE projects, focusing on AWS architecture, automation, CI/CD, observability and cloud-native operations.

- Develop and evolve AWS architectures considering availability, scalability, security, networking and cost.
- Automate infrastructure provisioning with Terraform and Infrastructure as Code practices.
- Build and operate containerized environments with Kubernetes, Amazon EKS, Docker and Helm.
- Implement CI/CD, GitOps, synthetic monitoring, dashboards and alerts with GitHub Actions, Argo CD, Elastic Stack, Prometheus, Grafana and OpenTelemetry.
- Investigate failures and integrations through metrics, logs, APIs and availability to support troubleshooting and incident resolution.

DevOps Engineer

FCamara | jan. 2023 – dez. 2024 | Florianópolis, SC | Remote

Worked on the automation, operation and evolution of cloud infrastructure and Kubernetes environments used by production applications.

- Provisioned AWS infrastructure with Terraform, including VPC, IAM, EC2, RDS, S3 and Amazon EKS.
- Structured CI/CD pipelines with GitHub Actions and managed Kubernetes applications with Helm.
- Implemented observability with Prometheus, Grafana, Loki and Elastic Stack.
- Supported production environments through troubleshooting, incident investigation and failure analysis.
- Collaborated with development teams to improve stability, observability and reliability.

Civil Engineer

Cymaco Engenharia and other companies | Mar 2012 – Jan 2023 | Santa Catarina, Brazil

Planned and monitored construction projects, focusing on cost, schedule and resource control. Prepared budgets, performed financial analysis, tracked schedules and supported decision-making, strengthening systems thinking, organization, risk analysis and problem-solving.

TECHNICAL PROJECTS

► End-to-End DevOps Architecture on AWS

AWS infrastructure with Terraform, a Jenkins CI/CD pipeline and continuous deployment on Kubernetes using GitOps and Argo CD. Monitoring with Prometheus and Grafana.

Stack: AWS • Terraform • Jenkins • Kubernetes • Argo CD • Prometheus • Grafana

► Multi-Cluster Observability on Kubernetes

Separate clusters for applications and observability, with centralized metrics and logs and automated infrastructure and networking using Terraform and Amazon EKS.

Stack: AWS • EKS • Terraform • Kubernetes • Prometheus • Grafana • Loki • Fluent Bit

► Kubernetes 360° Observability

Correlation of metrics, logs and traces using OpenTelemetry and Tempo, with practical application of SLIs, SLOs and error budgets.

► FinOps and AWS Cost Optimization

Cost monitoring, budget alerts, rightsizing and automated shutdown of idle resources.

Stack: AWS Cost Explorer • AWS Budgets • Compute Optimizer • Lambda

EDUCATION

Bachelor's Degree in Computer Science — In Progress

Universidade do Sul de Santa Catarina — Unisul • 2026 – 2029

Bachelor's Degree in Civil Engineering

Universidade do Sul de Santa Catarina — Unisul • 2012 – 2017

Technical Degree in Building Construction

Instituto Federal de Santa Catarina — IFSC • 2010 – 2011

CERTIFICATIONS & COURSES

- IBM DevOps and Software Engineering Professional Certificate — IBM / Coursera — In Progress
 - Terraform — From Basic to Advanced
 - SRE DevOps: End-to-End Journey
 - Databricks Fundamentals — Databricks Academy
